YUHAO CHEN

SOFTWARE ENGINEER / CLOUD INFRASTRUCTURE / DISTRIBUTED SYSTEMS

Seattle, WA | lightman.ece@gmail.com | linkedin.com/in/cedricchen

PROFILE

Software engineer at AWS building cloud-scale container infrastructure, distributed scheduling, and task lifecycle systems. Technical lead for cross-team ECS production initiatives.

EXPERIENCE

AMAZON WEB SERVICES / AMAZON ECS

2024 - Now

Software Development Engineer

- Managed Instances: Led an 8-engineer launch workstream across 3 teams; supported GA in 6 AWS Regions.
- Task lifecycle: Led 4 engineers delivering asynchronous orchestration for ECS container tasks, rolled out across commercial Regions and enabling 2 product launches.
- Agent credential store: Led zero-downtime migration to DynamoDB across AWS Regions, with reversible rollout phases and removal of approximately 2,300 lines of legacy code.
- GPU infrastructure: Leading design for resource-aware scheduling and task lifecycle integration.

AMAZON WEB SERVICES / INFRASTRUCTURE SYSTEMS

2020 - 2024

Software Development Engineer

- Built near-real-time inventory search across microservice stores and automated vendor ingestion.
- Designed a regional inventory service, Solr query path, and parts movement state machine.

EDUCATION

Georgia Institute of Technology — M.S. Computer Engineering / 2020

Zhejiang University — B.S. Computer Engineering / 2018

TECHNICAL FOCUS

AWS / Amazon ECS / Distributed systems / Resource scheduling / Container orchestration
Asynchronous workflows / Operational readiness / Data migrations / Security reviews
